## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al (Applicant's cited prior art U.S. 5,296,903).

Suzuki et al disclose an image forming apparatus comprising image forming means (i.e. developing device 3, Fig. 1) for forming an image on an image bearing member 1; transfer means 4 for electro statically transferring the image on the image bearing member onto a transfer medium 14 in a transfer portion (area near element 7, Fig. 4), the transfer means including a transfer member 4 nipping the transfer medium in a space with the image bearing member (Fig. 4) and voltage application means 36 for applying a voltage to the transfer member (Fig. 2); control means (i.e. current detector 40) for performing a detection operation to detect a voltage-current characteristic concerning the transfer member at the time of a non-transfer operation and determining a transfer voltage at the time of a transfer operation based on a detection result of the detection operation (Col. 5, line 26-46); and potential changing means (i.e. CPU 34, Col. 5, line 28) that capable of changing a potential a surface of the image bearing member on which the image has been formed by the image forming means and does not yet reach the transfer portion, wherein the control means performs the detection operation

Art Unit: 2852

at the time when the image bearing member surface processed by the potential changing means passes through the transfer portion (Col. 5, lines 5-10).

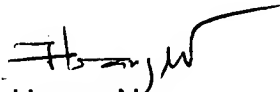

Suzuki et al further disclose the potential changing means comprising charging means 39 and exposing means 2, latent image forming means 2, developing means 3.
